Students from FoC have successfully reached the semi-final in the “Challenge:Future” Global Student Competition ([www.challengefuture.org](http://www.challengefuture.org)). Challenge:Future is an open youth competition that demonstrates youth creativity, their high potential and ability to foresee the future. It is the cross section of youth, universities, corporate companies and global challenges. There are 550 teams in total competing in all challenges of the competition, and about 100 teams have been selected in the semi-final. Team “Brain•Wave” has presented the original solution “ushare: Future Connections Service” within the “Call Me in 2020 Challenge” of the first round of the competition. The idea is to facilitate prosperity via world communications by combining physical and digital worlds, which was highly ranked by public voting. The team has now made it to the semi-final among more than 100 teams within the Call Me in 2020 Challenge. In the semi-final round in the “Breakthrough idea” challenge the team will further develop their idea and submit the idea proposal and short video presentation.

Team members are Anvar Nazarov (Team leader), Lawal Muhammad, Ivan Abrossimov and Fanli Meng, under the mentorship of Dr Yanguo Jing, Senior Lecturer of FoC.

We wish team Brain•Wave best luck in their endeavours towards the final of the competition in February 2010! You can support the team by registering to the competition web site and vote for the idea.
